

Meeting with Regina 11-01-2024

maintenance requests are most important

be prepared to answer why you picked the particular algorithm

focus on priority then move on to optimization

what risk analysis has been done, issues found

no issues right now but potential

behind schedule

what's the test procedure

so far - testing endpoints

write test procedure according to the requirements

will set up testing environment

how to showcase the system

show the key features that the system offers

continuous monitoring of asset status

automation

extensible / flexible

visualization, explainability

opensource

potentially - show how the system schedules - visualization/explainability
